Art Unit: 2116

memory that may receive and store, at a first clock rate used in the first clock domain, the

respective data and the receptive related control information, the memory also storing, in

association with the respective data and the respective related control information, the respective

identification information generated by the first logic section that may be used to identify the

receptive types of information represented by the respective data and the respective related

control information stored in the memory, the memory being configured to permit retrieval, at a

second clock rate used in the second clock domain, of the respective data, the respective related

control information, and the respective identification information stored in the memory...

For these reasons claims 1 and 11 are deemed to be allowable over the prior art of record,
